

5.1.1.

Write the first four terms of the sequences defined by the formulas in 1–6.

$$a_k = \frac{k}{10+k}, \text{ for every integer } k \geq 1$$

We must show a_1, a_2, a_3, a_4 .

$$\begin{aligned} a_1 &= \boxed{\frac{1}{11}} \\ a_2 &= \frac{2}{12} = \boxed{\frac{1}{6}} \\ a_3 &= \boxed{\frac{3}{13}} \\ a_4 &= \frac{4}{14} = \boxed{\frac{2}{7}} \end{aligned}$$

Solution: $a_1 = \frac{1}{11}$, $a_2 = \frac{1}{6}$, $a_3 = \frac{3}{13}$, $a_4 = \frac{2}{7}$
