

Compute the summations and products in 19-28.

5.1.21. $\sum_{k=1}^3 (k^2 + 1)$

$$\begin{aligned}\sum_{k=1}^3 (k^2 + 1) &= (1^2 + 1) + (2^2 + 1) + (3^2 + 1) \\ &= 2 + 5 + 10 = 17\end{aligned}$$

Solution: $\sum_{k=1}^3 (k^2 + 1) = 17$
