

Compute the summations and products in 19–28.

5.1.26. $\sum_{k=-1}^1 (k^2 + 3)$

$$\begin{aligned}\sum_{k=-1}^1 (k^2 + 3) &= ((-1)^2 + 3) + ((0)^2 + 3) + ((1)^2 + 3) = \\ &= 4 + 3 + 4 = 11\end{aligned}$$

Solution: $\sum_{k=-1}^1 (k^2 + 3) = 11$
